ARTICLES

THE ROLE OF SCIENTISTS IN RISK ASSESSMENT 283

Halina Szejwald Brown and Robert L. Goble

The authors argue that risk assessors belong to a profession and offer an alternative to the 1983 National Research Council model defining risk assessment. They support and illustrate their model by reexamining three familiar risk assessments: ethylene dibromide, WASH 1400, and Ice Minus Bacteria.

FEDERAL TECHNOLOGY TRANSFER: SHOULD WE BUILD SUBARUS IN BETHESDA?
. 313

Christopher J. Harnett

A critical examination of a policy designed to encourage commercial exploitation of federally funded biomedical research. The author argues that the implementation of this policy threatens the integrity of basic science in America.

MANDATORY CONTINUING EDUCATION: DOES IT REALLY PROTECT SOCIETY FROM
INCOMPETENT HEALTH PROFESSIONALS? 329

Patricia A. McPartland

Although the focus is narrow, this article argues that, in the face of short half-lives of current knowledge, continuing education requirements are needed and suggests possible improvements in the way that continuing education is implemented. While the issue is not explicitly addressed, readers might ponder whether such requirements might be profitably extended to other disciplines.

| PERCEIVED RISKS VERSUS ACTUAL RISKS: MANAGING HAZARDS THROUGH NEGOTIATION | 341 |
| <i>Kristin S. Shrader-Frechette</i> | |

The author describes what she calls the "Expert-Judgment Strategy", finding that, because it discounts lay perceptions of risk, it interferes with the acceptance of important but risky technologies.
